

## Job offering: Systems & Network Engineer

### About Vsora:

VSORA is a French fabless semiconductor company delivering ultra-high-performance AI inference solutions for both data centers and edge deployments. Our proprietary architecture achieves exceptional implementation efficiency, ultra-low latency, and minimal power draw - dramatically cutting inference costs across any workload.

Based in the outskirts of Paris (Headquartered in Meudon - France), the company was founded in 2015 by a team of highly qualified and accomplished AI/DSP experts and entrepreneurs (with offices around the world) and is about to initiate its commercial ramp up with a view to reach €500m+ in the next 2 years.

### Context

As part of strengthening our IT Department, we are looking for a **Systems & Network Engineer** reporting directly to the CIO.

You will work in a demanding, multi-technology industrial environment that is constantly evolving, requiring agility, autonomy, and the ability to adapt quickly.

The role is very hands-on, operational, and field-oriented. We are looking for someone able to efficiently handle day-to-day tasks, resolve incidents, improve existing systems, and support users. You will be a key player in ensuring the smooth daily operation of the IT system and the development of long terms infrastructures.

---

## Main Responsibilities

### Systems Administration & Operations

- Linux administration (servers & workstations)
- Windows administration (servers & workstations)
- Support for Mac environments (a plus)
- Management of virtualized environments (KVM, Docker)
- Certificate and authentication management (Kerberos)

### Identity & Directory Management

- LDAP administration (OpenLDAP, Apache DS, FreeIPA)
- Management of strong authentication systems (MFA, Token, SecureID...)
- Management of access policies and identity security

### Network & Infrastructure

- LAN / WAN administration
- HP Switching configuration
- HP Aruba WiFi management
- VLAN, routing, load balancing
- VPN (WireGuard)
- Network incident diagnosis and resolution

### **IT Security**

- Endpoint security
- Firewall administration (Stormshield is a plus)
- DLP (Data Loss Prevention)
- Access management and network segmentation

### **Messaging & Collaboration Tools**

- Proficiency with email clients (Outlook, Thunderbird...)
- Advanced user support
- Administration of cloud platforms (management console)

### **Support, Operations & Coordination**

- Autonomous incident management (prioritization & resolution)
  - Use of ticketing systems & asset management tools
  - Participation in infrastructure evolution projects
  - On-site user support (Level 2 / Level 3)
  - Technical interface with vendors and service providers
  - Monitoring of external interventions and escalations
- 

### **Candidate Profile**

- Bachelor's or Master's degree in IT (Bac+3 to Bac+5)
  - 3 to 5 years' experience in systems & network environments
  - Experience in an industrial environment is appreciated
  - Professional English (written & spoken)
- 

### **Key Skills**

- Strong adaptability & ease in an agile, changing environment
  - Analytical mindset and ability to prioritize
  - Autonomy and ability to work directly under a CIO
  - Rigor, method, and team spirit
  - Excellent, structured, and pedagogical communication
  - Ability to simplify technical topics for users
  - Service-oriented mindset
- 

### **Additional Advantages**

- GitHub knowledge
- Stormshield experience
- Hybrid on-prem / cloud environment
